

SWITCHGBX SERIES V1.17

To Update a SwitchGBx it needs to be powered up in the boot mode by holding the rotary encoder while powering up the device.

Please use dmXLAN Firmware Updater or dmXLAN 4.3 or higher to upload the firmware. To display the SwitchGBx that is in boot mode in dmXLAN: Menubar-> Edit -> Scan Network.

New Features:

- IGMP implemented.
IGMP can be enabled on individual ports to filter unnecessary Multicast traffic to a specific port. this setting can be done in the individual port menu by setting the port mode to IGMP enabled. The default is Normal mode with IGMP disabled.
- Vlan 1 renamed to Default to avoid confusion with Normal port mode
- Display Brightness - Dark/Bright

Bug Fixes:

- Fixed reboot needed after setting Loop
- Fixed long Boot time
- Fixed led color during boot "random"
